

The BIFSCo Executive Committee recommends the following direction for those submitting materials for evaluation and potential inclusion in the Pre-Harvest library:

- Trials should have a negative control
- Trials should show product efficacy and be “fit-for-purpose” (in cattle sourced for beef cuts and trim)
- Trials should be published in peer-review journals
- More than one publication with similar conclusions of efficacy is needed for each compound

Complete portfolios will be reviewed by a working group of industry scientists and a recommendation shared with the BIFSCo Executive Committee. The Committee will make the final decision which will be communicated to submitter.

Sincerely,  
BIFSCo Executive Committee
